European Technical Assessment

### ETA 14/0425 of 28/04/2020

**General Part** 

Technical Assessment Body issuing the European Technical Assessment Technický a zkušební ústav stavební Praha, s.p.						
Trade name of the construction product	DMX®					
Product family to which the construction product belongs	Product area: 13 Three-Dimensional Nailing Plates					
Manufacturer	DOMAX Sp.z o.o. Aleja Parku Krajobrazowego 109 84-207 Koleczkowo Łężyce Republic of Poland					
Manufacturing plant	DOMAX Sp.z o.o. Aleja Parku Krajobrazowego 109 84-207 Koleczkowo Łężyce Republic of Poland					
This European Technical Assessment contains	65 pages including 6 annexes, which form an integral part of this European Technical Assessment					
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	ETAG 015 used as European Assessment Document (EAD)					
This version replaces	ETA 14/0425, version 01, issued on 13/11/2014					

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body - Technical and Test Institute for Construction Prague. Any partial reproduction has to be identified as such.

**Specific Parts** 

#### 1 Technical description of the product

The three-dimensional nailing plates DMX<sup>®</sup> are one-piece, non-welded or welded (KKB, PS, SDP 90 A, SDP 90 B, SDP 100 A, SDP 100 B, SDP 120 A, SDP 120 B, SDSP 70 A, SDSP 70 B) elements, made of the cold-formed steel sheet grade DX51D according to EN 10346 with the zinc coating mass of 275 g/m<sup>2</sup>, electrogalvanized steel DC01 according to EN 10131 with corrosion protection Fe/Zn 12 or S235 according to EN 10025-2 with minimum 12  $\mu$ m of zinc layer. Elements SD and SDS have extra powder coating 60  $\mu$ m (see list below). The three-dimensional nailing plates DMX<sup>®</sup> correspond to the drawings and dimensions given in Annex 1.

Technical description of the product

#### 1.1 Identification

The identification parameters and reference to product specifications for identifying the materials and components which constitute the three dimensional nailing plates are given in Annex 1.

#### 2 Specification of the intended use(s) in accordance with the applicable European Assessment Document (hereinafter EAD)

The DMX<sup>®</sup> three-dimensional nailing plates are intended to be used in timber to timber connections as well as connections between a timber joist and a concrete structure or a steel member. For connecting the mutually perpendicular, load-bearing, solid timber elements, in side-grain to side-grain configurations, in joints for which requirements for mechanical resistance and stability in the sense of the basic requirement 1 of Regulation (EU) No 305/2011 shall be fulfilled.

Ring shank nails according to EN 14592 with the diameter of 4 mm and characteristic tensile capacity  $F_{ax,Rk}$  not less than 1.80 kN shall be used for connections made with the DMX<sup>®</sup> three-dimensional nailing plates.

In respect of the requirements concerning corrosion resistance, DMX<sup>®</sup> three-dimensional nailing plates are for use in timber structures subjected to the internal conditions defined by service classes 1, 2 and 3 (connectors with additional powder coating) according to EN 1995-1-1 (Eurocode 5), in corrosion aggressiveness categories C1 and C2 according to EN ISO 12944-2, without action of acid gases or vapours.

The provisions made in this European Technical Approval are based on an assumed working life of the product of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or approval body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

The assessment of the fitness of the DMX<sup>®</sup> three-dimensional nailing plates for the intended use has been made in compliance with the ETAG 015 "*Three-dimensional nailing plates*" used as European Assessment Document (EAD).

#### 2.1 Installation of three-dimensional nailing plates

The fitness for use of the DMX® three-dimensional nailing plates can only be assumed if the following conditions of installation are met:

- installation is carried out by appropriately qualified personnel under the supervision of the person qualified for this work,
- the original three-dimensional nailing plates only are used, supplied by the manufacturer together with the appropriate ring shank nails defined in clause 2.2.2,
- three-dimensional nailing plates installation is in accordance with the manufacturer's installation guide,
- before placing the three-dimensional nailing plates, the characteristics of timber members (type, class and moisture content) in which the nailing plates are to be placed are checked to ensure that they are identical or better than the characteristics of timber members used in testing in which the characteristic load-carrying capacities were determined,
- timber member placed in three-dimensional nailing plate does not contain the wanes and the gap between the connected elements does not exceed 3 mm.

# 3 Performance of the product and references to the methods used for its assessment

The assessment of the fitness for use of the three dimensional nailing plates according to the basic work requirements (BWR) were carried out in compliance with ETAG 015.

The European Technical Assessment is issued for the three dimensional nailing plates on the basis of agreed data and information, deposited at Technický a zkušební ústav stavební Praha, s.p., which identifies three dimensional nailing plates that has been assessed and judged. Changes to the plates or production process which could result in this deposited data and information being incorrect should be notified to Technický a zkušební ústav stavební Praha, s.p. before the changes are introduced. Technický a zkušební ústav stavební Praha, s.p. will decide whether or not such changes affect the ETA and consequently the validity of the CE marking on the basis of the ETA and if so whether further assessment or alternations to the ETA shall be necessary.

	Essential characteristic	Performance						
3.1 BW	3.1 BWR 1: Mechanical resistance and stability							
3.1.1	Joint strength	See Annex 3						
3.1.2	Joint stiffness	NPA						
3.1.3	Joint ductility in cyclic testing	NPA						
3.2 BW	R 2: Safety in case of fire							
3.2.1	Reaction to fire	The steel elements are classified as class A1 of reaction to fire (non-combustible products) in accordance with EN 13501-1+A1 and to European Commission Decision 96/603/EC amended by European Commission Decision 2000/605/EC.						
3.2.2	Resistance to fire	NPA						
3.3 BW	R 3: Hygiene, health and the enviro	onment						
3.3.1	Content, emission and/or release of dangerous substances	See 3.3.1						
BWR 4:	Safety and accessibility in use							
Not rele	evant							
BWR 5:	Protection against noise							
Not rele	evant							
BWR 6: Energy economy and heat retention								
Not rele	evant							
BWR 7:	Sustainable use of natural resource	ces						
Not rele	evant							

#### Table 1 Essential characteristics of the product

#### 3.1 Mechanical resistance and stability (BWR 1)

#### 3.1.1 Joint strength

The characteristic load-carrying capacities of joints loaded according to static diagrams (shown in Annex 2), determined by tests carried out according to ETAG 015, clause 5.1.3, are given in Annex 3. The characteristic load-carrying capacities of joints for other load direction shall be calculated on the basis of EN 1995-1-1 (Eurocode 5) or according to national regulations. The design values shall be determined according to EN 1995-1-1 (Eurocode 5).

Following the requirements of ETAG 015 for the minimum number of specimens for determining the characteristic load-bearing capacities through testing the applicant provided the laboratory with 5 specimens of each test assembly distinguished by a connector type, configuration of the connection and static scheme (direction of force actions).

The modifications of standard procedures applied come from the requirements of ETAG 015. The procedure specified in standard ref. 6 is modified as required in EOTA TR 016 *Method of testing Three-Dimensional Nailing Plates* with examples, namely the procedure corresponding to the case "*Test specimens fulfil EN ISO 8970*", which as stated above was relevant in all cases.

As agreed in between the applicant and the laboratory the manufacture, conditioning and transportation of the test assemblies into the laboratory was carried out by the applicant under specified conditions.

The conditions were as follows:

The timber members used – sawn timber blanks of European whitewood, grade C24, free from major defects in the area of the connector. Selection of timber members within a test group (the five specimens) referring to densities should comply with the requirements of EN ISO 8970. During testing of connectors at Technický a zkušební ústav stavební Praha, s.p. were used a timber specimens with characteristic density 350 kg/m<sup>3</sup>.

The samples came in four successive deliveries in condition "fit for direct testing" meaning that conditioning the timber elements to equilibrium moisture content in line with the requirements of Cl. 2.4.1.1.3.3. ETAG 015 was carried out by the applicant. The completed and conditioned test assemblies were delivered protected by a plastic wrap.

Conditioning in the laboratory consisted in equalisation of temperatures of the specimens and the ambient temperature by storing in the laboratory for 3 days as a minimum, during which time the specimens remained wrapped in plastic cover. In the majority of cases the term of storing was much longer.

Dimensions of the timber members, relative moisture content and weight of the assemblies were determined for control whether the density of timber blanks complies with the requirements of EN ISO 8970. This was carried out with specimens unwrapped just before the load testing of each specimen. It is stated that in the majority of cases the requirement of the standard have been met. In several cases when the mean wood density was above the scope stated by the standard, allowance was made in line with the respective provision of EOTA TR 016.

#### 3.1.2 Joint stiffness

No performance assessed.

#### 3.1.3 Joint ductility in cyclic testing

No performance assessed.

#### 3.2 Safety in case of fire (BWR 2)

#### 3.2.1 Reaction to fire

The steel elements are classified as class A1 of reaction to fire (non-combustible products) in accordance with EN 13501-1+A1 and to European Commission Decision 96/603/EC amended by European Commission Decision 2000/605/EC.

#### 3.2.2 Resistance to fire

Performance in relation to fire resistance would be determined for the complete structural element with any associated finishes, therefore there is no performance assessed option used to this Basic Work Requirement.

#### 3.3 Hygiene, health and the environment (BWR 3)

#### 3.3.1 Content, emission and/or release of dangerous substances

The manufacturer submit a written declaration whether or not and in which concentrations the three dimensional nailing plates contain substances which are classified as dangerous according to Directive 67/548/EEC and European Commission Regulation No 1272/2008. In addition to the specific clauses relating to dangerous substances, there may be other requirements applicable to the products falling within their scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Regulation, these requirements need also to be complied with, when and where they apply.

#### 3.4 Safety and accessibility in use (BWR 4)

Not relevant.

#### 3.5 **Protection against noise (BWR 5)**

Not relevant.

#### 3.6 Energy economy and heat retention (BWR 6)

Not relevant.

#### 3.7 Sustainable use of natural resources (BWR 7)

For the sustainable use of natural resources no performance was assessed for this product.

#### 3.8 Aspects of durability, serviceability and identification

#### 3.8.1 Durability and serviceability

The DMX<sup>®</sup> three-dimensional nailing plates have been assessed as having satisfactory durability and serviceability when used in conditions defined by service classes 1 and 2 according to EN 1995-1-1 (Eurocode 5).

#### 3.8.2 Identification

Each three-dimensional nailing plate is to be marked with the symbol and the product type designation according to the Annex 1.

# 4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the decision 1997/638/EC<sup>1</sup>, of the European Commission the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011 and Commission delegated Regulation (EU) No 568/2014) given in the following table applies:

Product(s)	Intended use(s)	Level(s) or class(es)	Attestation of conformity system(s)
Shear plates, toothed-plate connectors, punched nail plates, nailing plates	For structural timber products		2+

# 5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Issued in Prague on 28.04.2020

By Mária Schaan Head of the TAB

LU	LU 25 R120	14.6	414.5	14.76	12.3	2	

Notes:

1 Given forces are per one connector (one angle bracket), the test connections consisted of two connectors, forces for the complete connections are twice as high

2 One connector

3 The forces are given for the complete connection consisting of two connectors, hence force per one connector (one angle bracket) is half of the given value

#### THE CHARACTERISTIC LOAD-CARRYING CAPACITIES OF JOINTS (LOADING)

		10	ible 30			
Type group	Туре	Timber Moisture [%]	Density <i>p<sub>mean, 12%</sub></i> [kg⋅m <sup>-3</sup> ]	P <sub>max,</sub> <sup>mean</sup> [kN]	P <sub>max, k</sub> [kN]	Note No.

PS 100	124.4	57.3	12.2	9.6	7
PS 120	149.6	57.3	12.2	9.6	9.1
PS 140	174.8	57.3	12.2	9.6	7.8

 $N_{Rd,V}$  - Vertical load force,  $N_{Rd,H1}$  - Horizontal load force,  $N_{Rd,H2}$  - Vertical load force parallel to the side of base Document No.: KAO-L-PS-01

For combinations of loads (F<sub>Ed,V</sub>, F<sub>Ed,H1</sub>, F<sub>Ed,H2</sub>) a linear summation of the utilization ratios may be used. This method may be applied by using a following criteria:

$$\frac{F_{Ed,V}}{N_{Rd,V}} + \frac{F_{Ed,H1}}{N_{Rd,H1}} + \frac{F_{Ed,H2}}{N_{Rd,H2}} \le 1$$

#### **ANNEX 4**

#### NAILING PATTERNS

It is always necessary to put nails in the black marked holes. This is the only one proper pattern because too many or too long nails can weaken the wood, it's quite close to edge (rule is stated below).

### 4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the decision 1997/638/EC<sup>1</sup>, of the European Commission the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011 and Commission delegated Regulation (EU) No 568/2014) given in the following table applies:

Product(s)	Intended use(s)	Level(s) or class(es)	Attestation of conformity system(s)
Shear plates, toothed-plate connectors, punched nail plates, nailing plates	For structural timber products		2+

## 5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Issued in Prague on 28.04.2020
