

TSM High Performance

TSM High Performance

Material available in different versions

- zinc-plated steel
- zinc flake coating steel
- stainless steel A4
- stainless steel HCR

Base material

- reinforced and unreinforced normal concrete
- approval for concrete from C20/25 to C50/60
- cracked and non-cracked concrete

Product features

- quick and safe installation
- high load capacity
- can be loaded immediately
- adjustment possible
- fireproof (see below)

Applications

- fastening of high rack
- railing systems for bridge construction
- fire control plate fastening for tunnel construction

TSM High Performance

Single fastening

Technical characteristic without fire exposure for single fastening TSM / TSM A4 / TSM HCR

Screw size TSM high performance		TSM 6			TSM 8			TSM 10			TSM 12			TSM 14

for wet concrete, the anchoring depth must be increased by at least 30 mm																

¹⁾ The partial safety factor for material resistance from the approval $\gamma_M = 1.0$ as well as a partial safety factor for load actions $\gamma_F = 1.0$ were considered

TSM High Performance

Installation instruction:

Installation instruction with adjustment, only for the sizes 8 to 14

Important!!!

- The anchor may be adjusted maximum two times while the anchor may turn back at most 10 mm.
- The total allowed thickness of shims added during the adjustment process is 10mm.
- The final embedment depth after adjustment process must be equal or larger than h_{nom} .

TSM High Performance

Installation instruction

1-3 locate prestressing steel with the reinforcement bar detector and mark the location

4- create hole in the permissible anchoring area

5- clean hole

6- screw in the concrete screw

7- screw head must fully contact the fixture

TSM *High Performance*
